

COREP / FINREP Consolidated Run Report

Business explanation, technical walkthrough, and evidence snapshots

Run ID: DEMO-20260831-001 | Reporting date: 2026-08-31 | Entity: DEMO_BANK_CONSOLIDATED

Final conclusion

The latest Neuro SAN workflow result is BLOCKED. Submission is Prohibited. The controller recorded 2/7 release gates as passed and 3 open breaks. Review the detailed controller and agent evidence pages below for the reasons.

What this report contains

Part 1 explains the business problem and every agent's contribution. Part 2 explains Neuro SAN, orchestration, Gemini, governance, logging, and the React frontend. Part 3 contains rendered evidence snapshots from the real terminal, API, controller response, and specialist-agent artifacts. Part 4 explains the role of GitHub and Copilot in this forked project.

Important evidence boundary

The terminal and agent snapshots are rendered from real repository logs and command outputs. The GitHub Copilot chat window is not accessible as an image to the local process, so its role is documented accurately rather than represented as a fabricated screenshot.

1. Business Problem and Solution

Why the project exists and what the run was designed to do

Problem statement

A bank must turn month-end accounting and risk information into COREP and FINREP regulatory reporting. Before filing, the numbers must be complete, mathematically consistent, traceable to source records, reviewed, and approved.

Solution idea

A sequence of specialist agents performs the reporting lifecycle. The controller coordinates intake, mapping, quality checks, calculations, reconciliation, lineage, and approval. A failed hard gate can stop submission rather than allowing an unsupported figure to reach a regulator.

Input data

Synthetic General Ledger assets: EUR 1.25 billion. Liabilities plus equity: EUR 1.15 billion. Risk exposure: EUR 850 million. Own funds: EUR 150 million. The data is explicitly demo-only and contains no confidential bank data.

Business outcome

The model calculated healthy-looking ratios, but governance correctly treated the source imbalance as material. The final result was BLOCKED, submission PROHIBITED, checker decision REJECTED, 2 of 7 release gates passed, and 3 breaks remained open.

2. What Each Agent Did

Plain-language outputs corresponding to the run figures

1. Intake and Catalogue Agent

Received the synthetic General Ledger and risk snapshots. Recorded source IDs, dates, control totals, record counts, and schema hashes so later steps knew exactly which inputs were used.

2. Regulatory Mapping Agent

Translated accounting and risk records into COREP and FINREP template values. It produced assets, liabilities and equity, CET1, and risk exposure. It also flagged securities mapping confidence at 75%.

3. Data Quality Agent

Checked completeness, consistency, and the accounting identity. It found that EUR 1.25 billion of assets did not equal EUR 1.15 billion of liabilities plus equity. It also detected the artificial EUR 100 million plug.

4. Regulatory Calculation Agent

Calculated CET1 of EUR 150 million, TREA of EUR 850 million, capital ratio of 17.65%, minimum capital requirement of EUR 68 million, capital surplus of EUR 82 million, and preliminary leverage of 12.00%.

5. Reconciliation Agent

Compared source accounting values with regulatory outputs. It opened one critical EUR 100 million trial-balance break, one high EUR 100 million plug break, and one medium securities-mapping break.

6. Lineage and Evidence Agent

Checked whether reported values could be traced to source transactions. It found FINREP cell F 01.02.r320.c010 depended on ADJ-PLUG-100, which had no underlying General Ledger transaction.

7. Approval and Submission Agent

Applied hard release gates and maker-checker governance. Since five gates failed, it rejected the run, locked submission, and prevented any regulatory filing.

3. Neuro SAN Technical Walkthrough

How the fork executed the workflow

Startup

python -m neuro_san_studio run loaded the project environment, manifest, plugins, coded tools, and registry configuration. The Neuro SAN backend started on 8080 and nsflow started on 4173.

Network definition

registries/industry/corep_finrep_stp.hocon defined the controller, specialist agents, tools, delegation relationships, limits, and reporting responsibilities.

Session and orchestration

The user request created an nsflow session. The controller delegated work to specialists and passed each result into the next step. The harness managed context, streaming, traces, errors, and session state.

Tools and deterministic data

SyntheticReportingData supplied repeatable source records. Explicit controls and calculations provided deterministic checks; the LLM did not invent the source ledger.

LLM

config/llm_config.hocon selected Google Gemini gemini-3.6-flash for this run. Gemini interpreted instructions, reasoned over context, delegated, and explained results. It did not permanently learn or retrain from this run.

Adaptation

When the quality agent found the imbalance, the workflow adapted its next actions: reconciliation opened breaks, lineage investigated the plug, and approval changed the outcome from release to block. This is runtime context adaptation, not model training.

Governance

The checker evaluated hard gates, evidence, source traceability, severity, and maker-checker separation. The LLM could not override a failed gate.

Frontend

8502 read the latest controller response from nsflow.log and exposed /api/corep-finrep. React on 4174 polled through the Vite proxy and rendered status, stages, explanations, and evidence.

4. GitHub and Copilot Context

Repository metadata collected from git

Evidence snapshot rendered from the repository run artifacts

Origin: https://github.com/Hardik5shah5/neuro-san-studio_HStesting
Upstream: <https://github.com/cognizant-ai-lab/neuro-san-studio.git>
Branch: main
HEAD: 99914ac8 (delete include developer_llm_config.hocon)
Working tree: contains the COREP/FINREP registry, coded tool, React output, status API, tests, and documentation changes.
GitHub role: source control, fork ownership, branch history, collaboration, and storage of the project configuration and implementation.
Copilot/GitHub chat role: assisted repository exploration, code edits, debugging, explanation, validation, and report generation. Copilot's GPT-5.2 Luna label is separate from the locally configured Gemini runtime.

5. Evidence Snapshot: Terminal Startup

Rendered from the actual runner output

Evidence snapshot rendered from the repository run artifacts

```
python -m neuro_san_studio run
NSFLOW_HOST=0.0.0.0
nsflow client started on 0.0.0.0:4173
NeuroSan server http started on port: 8080
All processes now running.
industry/corep_finrep_stp added to allowed http service list
HTTP server is running on port 8080
```

6. Evidence Snapshot: Frontend API

Live payload consumed by React on port 4174

Evidence snapshot rendered from the repository run artifacts

```
GET /api/corep-finrep HTTP/1.1 200
```

```

# Regulatory Reporting Controller Summary & Run Status

**Run ID:** `DEMO-20260831-001`
**Reporting Date (As-Of):** `2026-08-31` (Month-End Cycle)
**Reporting Frameworks:** EBA COREP & FINREP
**Entity Scope:** `DEMO_BANK_CONSOLIDATED`
**Base Currency:** `EUR`
**Taxonomy Version:** `EU_TAXONOMY_DEMO_2026.1`
**Submission Channel:** EBA Regulatory Data Gateway / XBRL-XML Stream
**Overall Run Release Status:** `BLOCKED` / SUBMISSION PROHIBITED (Straight-Through Processing Inhibited)

---

## 1. Governance & Pipeline Execution Summary

All 7 regulatory reporting lifecycle stages were executed in the required sequence. Hard release gates failed during data quality, reconciliation, and lineage checks due to an underlying General Ledger trial balance error and a target balancing plug.

## 2. Stage-by-Stage Operational Results

### 1. Intake & Catalogue Agent
* **Source Snapshots Ingested:** `DEMO_GL_001` (6 GL accounts) & `DEMO_RISK_001` (4 risk metrics).
* **Control Totals:** GL Total Assets = €1,250,000,000.00; Risk Exposure = €850,000,000.00; Own Funds = €150,000,000.00.
* **Intake Status:** Validated and catalogued into the immutable inventory.

### 2. Regulatory Mapping Agent
* **Rules Applied:** `R-FIN-001` through `R-FIN-006`, `R-COR-001`, `R-COR-002` (Ruleset `v2026.1.0`).
* **Mapped Outputs:**
  * **FINREP F 01.01 (Assets):** €1,250,000,000.00
  * **FINREP F 01.02 (Liabilities & Equity):** €1,250,000,000.00 (includes €100m balancing adjustment/plug)
  * **COREP C 01.00 (CET1 Capital):** €150,000,000.00
  * **COREP C 02.00 (Total Risk Exposure Amount - TREA):** €850,000,000.00
* **Warning:** Rule `R-FIN-003` for Securities (€200m) assigned a 75% confidence score (sub-ledger granularity gap).

### 3. Data Quality Agent
* **Scorecard Result:** 81.25% Weighted Score — FAILED HARD CONTROLS.
* **Critical Validation Failure (`CTRL-VAL-001`):** GL Accounting Identity Failure: $Assets$ (€1,250m) ≠ $Liabilities$ (€1,000m) + $Equity$ (€150m) → $Variance$ = €100,000,000.00.
* **Consistency Failure (`CTRL-CON-002`):** Unmapped liability variance / forced plug on FINREP F 01.02 (€100m).

### 4. Regulatory Calculation Agent
* **COREP Own Funds (C 01.00):** CET1 = €150,000,000.00; Tier 1 = €150,000,000.00; Total Capital = €150,000,000.00.
* **COREP Minimum Capital Requirement (8% of TREA):** €68,000,000.00 → Capital Surplus = +€82,000,000.00.
* **Capital Ratios (C 03.00):**
  * CET1 Capital Ratio = 17.65% (Min: 4.50%)
  * Tier 1 Capital Ratio = 17.65% (Min: 6.00%)
```

[SYSTEM] @ 2026-09-11 09:36:10:

You are the Intake and Data Catalogue Agent. Build an immutable reporting-run inventory.
For every source, record system, dataset, owner, extraction timestamp, as-of date, record counts,
control totals, schema hash, classification, and access policy. Reject stale, partial, duplicate,
or schema-incompatible extracts. Never repair a source in place. Create a versioned exception with
impact, evidence, suggested owner, and whether the issue blocks straight-through processing.
For this prototype, begin by calling synthetic_data_provider with the requested reporting date.
Treat its response as the complete source snapshot. Clearly label the run as SYNTHETIC_DEMO_ONLY.

[HUMAN] @ 2026-09-11 09:36:10:
The inquiry is 'Initiate intake and cataloguing of source snapshots (general ledger, sub-ledgers, risk, finance,
reference data) for the month-end COREP and FINREP production cycle for reporting date 2026-08-31. Establish
reporting parameters including framework, entity perimeter, currency, submission channel, and taxonomy version,
and return the synthetic source snapshot details and catalogue metadata.'.
The mode is 'Fulfill'.

[AGENT] @ 2026-09-11 09:36:12:
Invoking: `synthetic_data_provider` with:
```json
{
 "invoked_agent_name": "synthetic_data_provider",
 "invoking_start": true,
 "params": {
 "reporting_date": "2026-08-31"
 }
}
```

9. Agent Evidence: Regulatory Mapping

Recorded specialist artifact: logs/thinking_dir/regulatory_reporting_controller.regulatory_mapping_agent

Evidence snapshot rendered from the repository run artifacts

```
F 01.01 (r0130_c0010)` - *Financial assets at amortised cost*. **Action:** Data Steward must confirm the
accounting valuation category (Amortised Cost vs. FVTPL) and populate sub-segmentation for `F 04.01` / `F 05.01`
(Sector/Counterparty split: Households, Non-Financial Corporates, Credit Institutions).
  * **`DEMO_GL_001.securities` (EUR 200,000,000):** Provisionally mapped to `F 01.01 (r0080_c0010)`.
**Action:** Require granular classification into Debt Securities vs. Equity Instruments, as well as portfolio
allocation (Hold to Collect vs. Hold to Collect & Sell).

2. **Validation Rules & Cross-Template Consistency Check:**
  * **FINREP Balance Sheet Check:**
    $$\text{Total Assets} = 150\text{M} + 850\text{M} + 200\text{M} + 50\text{M} = \text{EUR } 1,250,000,000$$
    $$\text{Total Liabilities} + \text{Equity} = 1,000\text{M} + 150\text{M} = \text{EUR } 1,250,000,000$$
    *Status: Pass (Balanced).*
  * **COREP Solvency Ratio Summary:**
    $$\text{Capital Ratio} = \frac{\text{Own Funds}}{\text{TREA}} = \frac{\text{EUR } 150,000,000}{\text{EUR } 850,000,000} = 17.65\%$$
    *Status: Pass (Compliant with minimum regulatory capital requirements).*

3. **Auditability & Lineage Preservation:**
  * **Superseded Mappings:** None for `EU_TAXONOMY_DEMO_2026.1`. Version history maintained from prior taxonomy
  release `2025.2.1`.
  * **Effective Scope:** Full consolidated scope (`DEMO_BANK_CONSOLIDATED`) in accordance with CRR Article 18.

[SYSTEM] @ 2026-09-11 09:36:41:

You are the Regulatory Mapping Agent. Use only an approved taxonomy and mapping-rule version.
Map source attributes to template cells, dimensions, sign conventions, currencies, consolidation
scope, and disclosure labels. Return mapping confidence, rationale, effective dates, and impacted
cells. Low-confidence or many-to-one mappings require a human data steward decision. Preserve all
superseded mappings and never infer a regulatory definition from ungoverned text alone.

[HUMAN] @ 2026-09-11 09:36:41:
The inquiry is 'Map governed finance and risk source snapshots (Run ID: DEMO-20260831-001, As-Of Date:
2026-08-31, Entity: DEMO_BANK_CONSOLIDATED, Currency: EUR, Taxonomy: EU_TAXONOMY_DEMO_2026.1) to active EBA
COREP and FINREP templates, dimensions, and reporting instructions.

Source Snapshot Inventory:
- DEMO_GL_001: Cash (€150m), Loans (€850m), Securities (€200m), Other Assets (€50m), Customer Deposits
(€1,000m), Equity (€150m). Total Assets: €1,250m.
- DEMO_RISK_001: Risk Exposure (€850m), Own Funds (€150m).

Provide explicit mapping rules, target COREP/FINREP templates, cell references, and mapping validation
results.'.
The mode is 'Fulfill'.

[SYSTEM] @ 2026-09-11 09:38:00:

You are the Regulatory Calculation Agent. Apply approved calculation logic, parameters, hierarchy,
rounding, aggregation, and taxonomy versions. Produce cell-level values and formula traces, including
inputs, intermediate results, exclusions, eliminations, and manual adjustments. Recalculate after every
approved correction. Flag values that depend on missing, estimated, or manually adjusted inputs and
never replace a failed calculation with a plausible estimate without explicit policy authorization.

[HUMAN] @ 2026-09-11 09:38:00:
The inquiry is 'Execute regulatory calculations for COREP and FINREP for Run ID: DEMO-20260831-001, Reporting
Date: 2026-08-31, Entity Scope: DEMO_BANK_CONSOLIDATED, Base Currency: EUR, Taxonomy: EU_TAXONOMY_DEMO_2026.1.

Context & Data Quality Background:
- Intake Data: GL Assets €1,250m (Cash €150m, Loans €850m, Securities €200m, Other €50m), Liabilities €1,000m
(Deposits), Equity €150m. Risk Exposure €850m, Own Funds €150m.
- DQ Status: Failed hard validity check CTRL-VAL-001 (GL Liab + Eq = €1,150m vs Assets €1,250m; €100m variance).
Securities mapping rule R-FIN-003 flagged at 75% confidence.
- Mapped items:
 * FINREP Assets: €1,250m
 * FINREP Liabilities & Equity: €1,250m (with €100m balancing note/plug in mapped target)
 * COREP Own Funds (CET1): €150m
 * COREP Total Risk Exposure Amount (TREA): €850m

Calculate and output all controlled regulatory metrics: COREP Own Funds, Capital Ratios (CET1, Tier 1, Total
Capital), Minimum Capital Requirements (8%), Capital Surplus/Deficit, FINREP Balance Sheet Totals, and
Leverage/Liquidity preliminary estimates. Document all calculation formulas, rule versions, and control
checks.'.
The mode is 'Fulfill'.

Recorded specialist artifact: logs/thinking\_dir/regulatory\_reporting\_controller.reconciliation\_agent

## Evidence snapshot rendered from the repository run artifacts

```
e for Run ID `DEMO-20260831-001` has been executed across five key operational and regulatory dimensions:
1. **Sub-Ledger to General Ledger (SL-to-GL)**
2. **GL Balance Sheet Integrity (Internal Balance Control)**
3. **Cross-Report Reconciliation (FINREP vs. COREP)**
4. **Accounting-to-Risk Reconciliation (GL/FINREP vs. Risk Engine Outputs)**
5. **Period-over-Period (PoP) and Opening-to-Closing Roll-Forward**

Control Dashboard

| Control ID | Control Name | Target Grain | Tolerance (Absolute / %) | Actual Variance | Status | Block Submission? |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| **CTRL-VAL-001** | GL Balance Sheet Integrity (A = L + E) | Consolidated Entity / EUR | €0.00 / 0.00% | **€100.00m** | **FAILED** | **YES** |
| **CTRL-SLGL-001** | Sub-Ledger to GL (Loans & Deposits) | Sub-Ledger Product / EUR | €0.05m / 0.01% | €0.00m | **PASSED** | NO |
| **CTRL-MAP-001** | FINREP F 01.02 to GL Liab & Equity | Report Item / Line Grain | €0.00 / 0.00% | **€100.00m** | **FAILED** | **YES** |
| **CTRL-A2R-001** | CET1 Capital: GL Equity to COREP C 01.00 | Capital Grain / EUR | €0.00 / 0.00% | €0.00m | **PASSED** | NO |
| **CTRL-A2R-002** | Exposure/TREA: GL Loans to COREP C 02.00 | Risk Asset Grain / EUR | N/A (Analytical) | €0.00m (Coincidental) | **WARNING** | NO |
| **CTRL-QUAL-003** | Mapping Confidence Rule R-FIN-003 | Class Level / Securities | Threshold 90% | 75% Confidence | **WARNING** | NO |

2. Detailed Reconciliation Results by Dimension

A. Sub-Ledger to General Ledger (SL-to-GL) Reconciliation
* **Cash Sub-Ledger vs. GL Cash:** €150.00m vs. €150.00m | **Variance:** €0.00m (Matched)
* **Loan Sub-Ledger vs. GL Loans:** €850.00m vs. €850.00m | **Variance:** €0.00m (Matched)
* **Securities Sub-Ledger vs. GL Securities:** €200.00m vs. €200.00m | **Variance:** €0.00m (Matched)
* **Deposit Sub-Ledger vs. GL Liabilities:** €1,000.00m vs. €1,000.00m | **Variance:** €0.00m (Matched)
* **Sub-Ledger Total Assets to GL Total Assets:** €1,250.00m vs. €1,250.00m | **Variance:** €0.00m (Matched)

> **Finding:** Sub-ledgers tie back to the intake GL source accounts without granular feeding breaks.

B. General Ledger Internal Integrity (Balance Sheet Control)
* **Total Intake GL Assets:** €1,250.00m
 * Cash: €150.00m
 * Loans: €850.00m
 * Securities: €200.00m
 * Other Assets: €50.00m
* **Total Intake GL Liabilities & Equity:** €1,150.00m
 * Liabilities (Deposits): €1,000.00m
 * Equity: €150.00m
* **GL Imbalance (Control CTRL-VAL-001):** **€100.00m Asset Surplus / Credit Deficit**

> **Finding:** The intake GL is fundamentally out of balance. An unposted credit balance or unmapped funding source of €100.00m exists in the source core banking system.

C. Accounting-to-Regulatory (GL vs. FINREP / COREP) & Cross-Report Reconciliation

1. GL Assets (€1,250m) vs. FINREP F 01.01 Assets (€1,250m)
* **Variance:** €0.00m (Matched)

2. GL Liabilities & Equity (€1,150m) vs. FINREP F 01.02 Liabilities & Equity (€1,250m)
* **Variance:** **€100.00m**
* **Root Cause:** Target template FINREP F 01.02 contains an automated balancing plug / adjustment note of €100.00m in order to force `Assets = Liabilities + Equity`.
* **Policy Breach:** Utilizing balancing plugs to override source accounting gaps violates regulatory submission controls.
```

# 13. Agent Evidence: Lineage and Evidence

=====
CONTROL EVALUATION LOG — RUN ID: DEMO-20260831-001
=====

[CTRL-VAL-001] GL Trial Balance Equality Control
- Execution Status : FAILED
- Threshold : €0.00
- Discrepancy : €100,000,000.00
- Formula : GL Assets (€1,250m) - [GL Liabilities (€1,000m) + GL Equity (€150m)]
- Root Cause : €100m unbooked asset addition or missing liability entry in ledger.

[CTRL-CON-002] FINREP F 01.01 vs F 01.02 Cross-Table Consistency Check
- Execution Status : FAILED (Passed only via unverified manual plug)
- Raw Discrepancy : €100,000,000.00
- Mitigating Plug : ADJ-PLUG-100 applied to F 01.02.r320.c010
- Governance Action: Reject plug for formal regulatory submission.

```
human approver. Only after recorded approval may you prepare or
invoke a submission. Verify the regulator response, archive acknowledgement and payload hash, and
never claim submission success without a verifiable receipt.

[HUMAN] @ 2026-09-11 09:39:56:
The inquiry is 'Evaluate hard release gates, prepare the approval pack, evaluate maker-checker decisions, and
determine filing release status for Run ID: DEMO-20260831-001, Reporting Date: 2026-08-31, Entity Scope:
DEMO_BANK_CONSOLIDATED, Currency: EUR.

Context from previous steps:
- Framework: EBA COREP & FINREP
- Taxonomy: EU_TAXONOMY_DEMO_2026.1
- Snapshot Hashes: GL (a8f9d0c3...), Risk Engine, Mapping (7b23e891...), Mapped Payload (3c4b5a69...)
- Calculation Outputs:
 * COREP C 01.00 CET1 = €150m
 * COREP C 02.00 TREA = €850m
 * Capital Ratios = 17.65%
 * FINREP F 01.01 Assets = €1,250m
 * FINREP F 01.02 Liabilities & Equity = €1,250m (includes €100m target balancing plug)
 * Preliminary Leverage Ratio = 12.00%
- Controls & Breaks:
 * CTRL-VAL-001 FAILED (GL trial balance gap: Assets €1,250m vs Liab+Eq €1,150m, variance €100m)
 * CTRL-CON-002 FAILED (Target plug applied)
 * Rule R-FIN-003 Securities 75% confidence
 * Reconciliation Breaks: BRK-20260831-001 (Critical - €100m GL imbalance), BRK-20260831-002 (High - €100m
target plug), BRK-20260831-003 (Medium - Securities mapping)
 * Lineage: Gap on F 01.02.r320.c010 (synthetic balancing plug ADJ-PLUG-100)

Evaluate release gates, render maker-checker determination, record approval decision, block submission, and
outline next accountable actions.'.
The mode is 'Fulfill'.

[AI] @ 2026-09-11 09:40:20:
Executive Summary & Filing Release Determination

* **Run ID:** `DEMO-20260831-001`
* **Reporting Date:** 2026-08-31
* **Entity Scope:** `DEMO_BANK_CONSOLIDATED`
* **Reporting Framework:** EBA COREP & FINREP (`EU_TAXONOMY_DEMO_2026.1`)
* **Currency:** EUR
* **Filing Release Status:** `BLOCKED` / SUBMISSION PROHIBITED
* **Maker-Checker Determination:** REJECTED BY CHECKER

Reason for Blocking:
The run contains unresolved **Critical** and **High** severity controls and reconciliation failures, including a
fundamental General Ledger Trial Balance imbalance of **€100,000,000.00** (`CTRL-VAL-001` / `BRK-20260831-001`)
and an artificial synthetic balancing plug (`ADJ-PLUG-100` / `BRK-20260831-002`) on FINREP F 01.02. Pursuant to
strict separation-of-duties and release governance, submission to the national competent authority (NCA) is
strictly hard-stopped until material accounting identity breaks are remediated and lineage is restored.

1. Hard Release Gate Evaluation

| Gate ID | Release Gate Description | Evaluation Status | Blocking Status | Unresolved Materiality /
Observations |
| :--- | :--- | :--- | :--- | :--- |
| **GATE-01** | Perimeter & Taxonomy Governance | **PASSED** | Clear | `EU_TAXONOMY_DEMO_2026.1` approved for
COREP/FINREP scope. |
| **GATE-02** | Source Data Freshness & Completeness | **FAILED** | **BLOCKING** | GL Source data
incomplete/unbalanced (Assets €1,250m vs Liab+Eq €1,150m). |
| **GATE-03** | Deterministic Control Validations | **FAILED** | **BLOCKING** | `CTRL-VAL-001` (GL Gap €100m) &
`CTRL-CON-002` (Target Plug) Failed. |
| **GATE-04** | Material Reconciliation Clearance | **FAILED** | **BLOCKING** | `BRK-20260831-001` (€100m
Critical GL break) open and unaccepted. |
| **GATE-05** | Lineage Completeness & Traceability | **FAILED** | **BLOCKING** | Lineage broken on F
```

# 15. Repeatable Execution Checklist

Run this sequence each time the GitHub Codespace is reopened

## Terminal 1: start Neuro SAN

```
cd /workspaces/neuro-san-studio_HStesting
source venv/bin/activate
NSFLOW_HOST=0.0.0.0 python -m neuro_san_studio run
```

Keep this terminal running.

## Browser: submit the agent request

Open forwarded port 4173. Select industry/corep\_finrep\_stp. Submit: Run the month-end COREP and FINREP production cycle for reporting date 2026-08-31. Wait for the controller summary.

## Terminal 2: start the result API

```
cd /workspaces/neuro-san-studio_HStesting
source venv/bin/activate
python apps/neuro_san_status/status_dashboard.py
```

This serves port 8502.

## Terminal 3: start React

```
cd /workspaces/neuro-san-studio_HStesting/apps/corep_finrep_react
npm install
npm run dev -- --host 0.0.0.0 --port 4174
```

Open forwarded port 4174.

## Terminal 4: generate the aligned PDF

```
cd /workspaces/neuro-san-studio_HStesting
source venv/bin/activate
python tools/create_corep_finrep_report.py
```

The script reads the newest completed run and creates a run-specific PDF.

## Browser: open the PDF

Start `python -m http.server 8765 --bind 0.0.0.0 --directory docs`, forward port 8765, and open the generated file named `COREP_FINREP_<RUN_ID>_consolidated_report.pdf`.

## Final alignment check

Compare the run ID and status in the PDF, port 4174, and `curl -s http://127.0.0.1:4174/api/corep-finrep`. They must all refer to the same run.

# 17. Final Conclusion and Remediation

What the business should take away

## Conclusion

The fork demonstrated a complete, observable, governed COREP/FINREP run. Neuro SAN coordinated specialist agents, Gemini supplied language reasoning, coded tools supplied deterministic demo data, governance agents tested it, and React presented the result. The system completed successfully by refusing an unsafe submission.

## Required next actions

Correct the EUR 100 million General Ledger difference. Remove ADJ-PLUG-100. Improve securities mapping confidence. Re-ingest corrected data. Re-run the pipeline. Re-evaluate the seven release gates before submission.
